CC The present invention discloses new feline interleukin 18 (IL-18), feline
CC caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC proteins. A composition comprising a feline IL-18, feline caspase-1,
CC feline IL-12 single chain or canine IL-12 single chain proteins, a
CC nucleic acid encoding these proteins, mimetopes of these proteins,
CC multimeric forms of these proteins, an antibody against these proteins,
CC or an inhibitor identified by its ability to inhibit the activity of
CC these proteins, can be used to treat or prevent autoimmune diseases,
CC allergic reactions, infectious diseases, tumour development, inflammatory
CC diseases and/or graft rejection in animals. The present nucleic acid
CC sequence represents a feline interleukin 12 DNA sequence, as described in
CC the invention

Feline interleukin 18 (IL-18), feline caspase-1, feline IL-12 single chain and canine IL-12 single chain proteins, useful for treating and preventing autoimmune diseases, inflammatory diseases and/or graft rejection in animals.

Example 3; Page 54; 106pp; English.

The present invention discloses new feline interleukin 18 (IL-18), feline caspase-1, feline IL-12 single chain and canine IL-12 single chain proteins. A composition comprising a feline IL-18, feline caspase-1, feline IL-12 single chain or canine IL-12 single chain proteins, a nucleic acid encoding these proteins, mimetopes of these proteins, multimeric forms of these proteins, an antibody against these proteins, or an inhibitor identified by its ability to inhibit the activity of these proteins, can be used to treat or prevent autoimmune diseases, allergic reactions, infectious diseases, tumour development, inflammatory diseases and/or graft rejection in animals. The present nucleic acid sequence represents a feline interleukin 12 DNA sequence, as described in the invention

PT New nucleic acid molecule comprising a sequence encoding a feline p35 or
PT p40 subunit protein and a nucleic acid linker, useful in preparing a
PT vaccine against infectious diseases in feline animals.
XX
PS Claim 23; SEQ ID NO 29; 103pp; English.
XX
CC The present invention relates to the feline interleukin (IL)-12p35 or p40

CC subunit protein and their encoding nucleic acid molecules and a nucleic
CC acid linker. The invention also provides the feline caspase (casp)-1,
CC feline IL-18 single chain and canine IL-12 single chain proteins and
CC their nucleic acid molecules. The nucleic acid molecule is useful in
CC preparing a vaccine against infectious diseases in feline animals. The
CC present sequence is the feline single chain IL-12p40 subunit protein
CC encoding full-length cDNA.

PT   Vaccine for treating or preventing lentivirus infection in cats, contains
PT   nucleic acid sequence encoding viral protein under control of eukaryotic
PT   promoter.
XX
PS   Claim 14; Page 36; 37pp; German.
XX
CC   This invention describes a novel vaccine (A) for prevention or treatment
CC   of lentivirus infection in felines which comprises an immunizing nucleic
CC   acid sequence (I) that contains, or comprises, at least part of a gene
CC   encoding a protein (II) of the virus, under control of a eukaryotic
CC   promoter functional in the relevant animal. (II) is especially the
CC   envelope (env) protein. The invention also describes (1) vaccine (A)
CC   containing an immunizing protein, or fragment, from a lentivirus plus at
CC   least one of interleukin (IL)-12 and/or -16; and (2) preparation of a
CC   lentivirus protein, or fragment, especially derived from feline immune
CC   deficiency virus (FIV), by expressing the corresponding nucleic acid
CC   sequence in a host cell. The products of the invention have antiviral
CC   activity. The vaccine (A) and related protein-based vaccines, are
CC   particularly used to treat or prevent lentivirus infections in domestic
CC   cats, especially feline immune deficiency virus (FIV). Vaccination with
CC   (A) allows differentiation between vaccinated and infected animals, from
CC   the antibody status. The vaccines may be formulated with an adjuvant
CC   (particularly interleukin-12 and/or IL-16) that elicits a cytotoxic
CC   immune response, particularly a Th1 response

PT Recombinant feline interleukin-12, useful as immunostimulant and for
PT treating e.g. viral infections in cats, and related nucleic acid
PT constructs.
XX
PS Claim 3; Page 30; 35pp; German.
XX
CC This invention describes a novel feline interleukin-12 (fIL-12)
CC polypeptide (I) that is expressed, by recombinant gene expression in
CC eukaryotic or prokaryotic cells, in the form of both polypeptide chains
CC of subunits p35 and p40. These proteins are formed so that, in equimolar
CC concentrations and in presence of an immunizing antigen, they can be
CC administered to carnivores, particularly domestic cats. The invention
CC also describes a nucleic acid construct (II) encoding fIL-12 containing
CC sequences at least 95% identical with the p40- and p35-encoding sequences
CC (A, 990 bp and B, 669 bp respectively), reproduced in the specification,
CC as immunostimulants for immunization against infectious diseases and/or
CC for treating infections or tumors in felines, especially domestic cats.
CC The products of the invention have immunostimulatory, antiviral and
CC antitumor activity. Nucleic acid constructs that encode (II) are useful
CC as adjuvants for prophylactic immunization against viral diseases and for
CC treating diseases associated with a Th1 defect. IL-12 induces synthesis
CC of interferon gamma (Th1 response). The feline interleukin-12 polypeptide
CC is useful for carnivores, and particularly domestic cats in the
CC following: (i) as immunostimulant, for preventative or therapeutic use;
CC and (ii) treating tumors and autoimmune diseases, or diseases associated
CC with a Th1 defect, especially pre-existing infections by feline immune
CC deficiency virus (FIV), feline leukemia virus and corona virus

PT Vaccine for treating or preventing lentivirus infection in cats, contains
PT nucleic acid sequence encoding viral protein under control of eukaryotic
PT promoter.
XX
PS Disclosure; Page 29-31; 37pp; German.
XX
CC This invention describes a novel vaccine (A) for prevention or treatment
CC of lentivirus infection in felines which comprises an immunizing nucleic
CC acid sequence (I) that contains, or comprises, at least part of a gene
CC encoding a protein (II) of the virus, under control of a eukaryotic
CC promoter functional in the relevant animal. (II) is especially the
CC envelope (env) protein. The invention also describes (1) vaccine (A)
CC containing an immunizing protein, or fragment, from a lentivirus plus at
CC least one of interleukin (IL)-12 and/or -16; and (2) preparation of a
CC lentivirus protein, or fragment, especially derived from feline immune
CC deficiency virus (FIV), by expressing the corresponding nucleic acid
CC sequence in a host cell. The products of the invention have antiviral
CC activity. The vaccine (A) and related protein-based vaccines, are
CC particularly used to treat or prevent lentivirus infections in domestic
CC cats, especially feline immune deficiency virus (FIV). Vaccination with
CC (A) allows differentiation between vaccinated and infected animals, from
CC the antibody status. The vaccines may be formulated with an adjuvant
CC (particularly interleukin-12 and/or IL-16) that elicits a cytotoxic
CC immune response, particularly a Th1 response

Feline interleukin 18 (IL-18), feline caspase-1, feline IL-12 single chain and canine IL-12 single chain proteins, useful for treating and preventing autoimmune diseases, inflammatory diseases and/or graft rejection in animals.

Example 3; Page 75-76; 106pp; English.

The present invention discloses new feline interleukin 18 (IL-18), feline caspase-1, feline IL-12 single chain and canine IL-12 single chain proteins. A composition comprising a feline IL-18, feline caspase-1, feline IL-12 single chain or canine IL-12 single chain proteins, a nucleic acid encoding these proteins, mimetopes of these proteins, multimeric forms of these proteins, an antibody against these proteins, or an inhibitor identified by its ability to inhibit the activity of these proteins, can be used to treat or prevent autoimmune diseases, allergic reactions, infectious diseases, tumour development, inflammatory diseases and/or graft rejection in animals. The present nucleic acid sequence represents a feline interleukin 12 DNA sequence, as described in the invention

   New nucleic acid molecule comprising a sequence encoding a feline p35 or
   p40 subunit protein and a nucleic acid linker, useful in preparing a
   vaccine against infectious diseases in feline animals.

   Claim 24; SEQ ID NO 55; 103pp; English.

   The present invention relates to the feline interleukin (IL)-12p35 or p40
   subunit protein and their encoding nucleic acid molecules and a nucleic
   acid linker. The invention also provides the feline caspase (casp)-1,
   feline IL-18 single chain and canine IL-12 single chain proteins and
   their nucleic acid molecules. The nucleic acid molecule is useful in
   preparing a vaccine against infectious diseases in feline animals. The
   present sequence is the feline N-terminal single chain IL-12p40 protein
   encoding cDNA.

PS Example 3; SEQ ID NO 57; 103pp; English.
XX
CC The present invention relates to the feline interleukin (IL)-12p35 or p40
CC subunit protein and their encoding nucleic acid molecules and a nucleic
CC acid linker. The invention also provides the feline caspase (casp)-1,
CC feline IL-18 single chain and canine IL-12 single chain proteins and
CC their nucleic acid molecules. The nucleic acid molecule is useful in
CC preparing a vaccine against infectious diseases in feline animals. The
CC present sequence is the feline N-terminal single chain IL-12p40
CC complementary DNA.

Novel feline cytokine protein - useful for treating feline auto:immune diseases, e.g. those caused by feline herpes virus or feline calcivirus.

Claim 19; Page 52-54; 94pp; Japanese.

This sequence encodes a novel feline cytokine protein, FLAFp40. This protein can be used in the production of a FLAFp35/FLAFp40 heterodimer which can potentiate the cytotoxic activity of feline cytotoxic T lymphocyte cells. Such proteins are used for treatment of feline autoimmune diseases e.g. as caused by feline herpes virus or feline calcivirus

PT Novel feline cytokine protein - useful for treating feline auto:immune
PT diseases, e.g. those caused by feline herpes virus or feline calcivirus.
XX
PS Claim 20; Page 55; 94pp; Japanese.
XX
CC This sequence encodes a novel feline cytokine mature protein, FLAFp40.
CC This protein can be used in the production of a FLAFp35/FLAFp40
CC heterodimer which can potentiate the cytotoxic activity of feline
CC cytotoxic T lymphocyte cells. Such proteins are used for treatment of
CC feline autoimmune diseases e.g. as caused by feline herpes virus or
CC feline calcivirus

PS Claim 6; Page 58-60; 106pp; English.
XX
CC The present invention discloses new feline interleukin 18 (IL-18), feline
CC caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC proteins. A composition comprising a feline IL-18, feline caspase-1,
CC feline IL-12 single chain or canine IL-12 single chain proteins, a
CC nucleic acid encoding these proteins, mimetopes of these proteins,
CC multimeric forms of these proteins, an antibody against these proteins,
CC or an inhibitor identified by its ability to inhibit the activity of
CC these proteins, can be used to treat or prevent autoimmune diseases,
CC allergic reactions, infectious diseases, tumour development, inflammatory
CC diseases and/or graft rejection in animals. The present nucleic acid
CC sequence represents a feline interleukin 12 DNA sequence, as described in
CC the invention

T   New nucleic acid molecule comprising a sequence encoding a feline p35 or
T   p40 subunit protein and a nucleic acid linker, useful in preparing a
    vaccine against infectious diseases in feline animals.
X
    Claim 24; SEQ ID NO 38; 103pp; English.

    The present invention relates to the feline interleukin (IL)-12p35 or p40
    subunit protein and their encoding nucleic acid molecules and a nucleic
    acid linker. The invention also provides the feline caspase (casp)-1,
    feline IL-18 single chain and canine IL-12 single chain proteins and
    their nucleic acid molecules. The nucleic acid molecule is useful in
    preparing a vaccine against infectious diseases in feline animals. The
    present sequence is the feline single chain IL-12 protein encoding cDNA.

XX
CC The present invention relates to the feline interleukin (IL)-12p35 or p40
CC subunit protein and their encoding nucleic acid molecules and a nucleic
CC acid linker. The invention also provides the feline caspase (casp)-1,
CC feline IL-18 single chain and canine IL-12 single chain proteins and
CC their nucleic acid molecules. The nucleic acid molecule is useful in
CC preparing a vaccine against infectious diseases in feline animals. The
CC present sequence is the feline single chain IL-12 complementary DNA.

PT Feline interleukin 18 (IL-18), feline caspase-1, feline IL-12 single
PT chain and canine IL-12 single chain proteins, useful for treating and

preventing autoimmune diseases, inflammatory diseases and/or graft rejection in animals.

Claim 1; Page 49-50; 106pp; English.

The present invention discloses new feline interleukin 18 (IL-18), feline caspase-1, feline IL-12 single chain and canine IL-12 single chain proteins. A composition comprising a feline IL-18, feline caspase-1, feline IL-12 single chain or canine IL-12 single chain proteins, a nucleic acid encoding these proteins, mimetopes of these proteins, multimeric forms of these proteins, an antibody against these proteins, or an inhibitor identified by its ability to inhibit the activity of these proteins, can be used to treat or prevent autoimmune diseases, allergic reactions, infectious diseases, tumour development, inflammatory diseases and/or graft rejection in animals. The present nucleic acid sequence represents a feline interleukin 12 DNA sequence, as described in the invention

```
CC   The present invention discloses new feline interleukin 18 (IL-18), feline
CC   caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC   proteins. A composition comprising a feline IL-18, feline caspase-1,
CC   feline IL-12 single chain or canine IL-12 single chain proteins, a
CC   nucleic acid encoding these proteins, mimetopes of these proteins,
CC   multimeric forms of these proteins, an antibody against these proteins,
CC   or an inhibitor identified by its ability to inhibit the activity of
CC   these proteins, can be used to treat or prevent autoimmune diseases,
CC   allergic reactions, infectious diseases, tumour development, inflammatory
CC   diseases and/or graft rejection in animals. The present nucleic acid
CC   sequence represents a feline interleukin 12 DNA sequence, as described in
CC   the invention

X
X   The present invention relates to the feline interleukin (IL)-12p35 or p40
X   subunit protein and their encoding nucleic acid molecules and a nucleic
X   acid linker. The invention also provides the feline caspase (casp)-1,
X   feline IL-18 single chain and canine IL-12 single chain proteins and
X   their nucleic acid molecules. The nucleic acid molecule is useful in
X   preparing a vaccine against infectious diseases in feline animals. The
X   present sequence is the feline single chain IL-12 complementary DNA.

   New nucleic acid molecule comprising a sequence encoding a feline p35 or
   p40 subunit protein and a nucleic acid linker, useful in preparing a
   vaccine against infectious diseases in feline animals.

   Claim 24; SEQ ID NO 43; 103pp; English.

   The present invention relates to the feline interleukin (IL)-12p35 or p40
   subunit protein and their encoding nucleic acid molecules and a nucleic
   acid linker. The invention also provides the feline caspase (casp)-1,
   feline IL-18 single chain and canine IL-12 single chain proteins and
   their nucleic acid molecules. The nucleic acid molecule is useful in
   preparing a vaccine against infectious diseases in feline animals. The
   present sequence is the feline single chain IL-12 protein encoding cDNA.

PT   Nucleic acids encoding modified cytokine polypeptides (i.e. modified p40
PT   and p35 polypeptides), useful for treating various diseases e.g. diabetic
PT   retinopathy and cancer.
XX
PS   Claim 1; Page 136; 223pp; English.
XX
CC   The invention relates to nucleic acids encoding modified cytokine
CC   polypeptides (i.e. modified p40 and p35 polypeptides). The modified
CC   cytokine polypeptides have T-cell proliferative and interferon (IFN)-
CC   gamma induction activities. The polypeptides and polynucleotides of the
CC   invention are useful for treating various diseases e.g. bacterial
CC   infections, AIDS, diabetic retinopathy and cancer. The polypeptide and
CC   polynucleotide may also be useful as a vaccine adjuvant, to enhance a
CC   vaccinated host's cell-mediated immunity for protective response to a
CC   pathogen. The present sequence is a modified human p40 protein encoding
CC   DNA

   New nucleic acid molecule comprising a sequence encoding a feline p35 or
   p40 subunit protein and a nucleic acid linker, useful in preparing a
   vaccine against infectious diseases in feline animals.

   Disclosure; SEQ ID NO 54; 103pp; English.

   The present invention relates to the feline interleukin (IL)-12p35 or p40
   subunit protein and their encoding nucleic acid molecules and a nucleic
   acid linker. The invention also provides the feline caspase (casp)-1,
   feline IL-18 single chain and canine IL-12 single chain proteins and
   their nucleic acid molecules. The nucleic acid molecule is useful in
   preparing a vaccine against infectious diseases in feline animals. The
   present sequence is the canine single chain IL-12p40 subunit reverse
   complementary DNA.

PT Canine cytokine protein which activates canine cytotoxic T lymphocytes -
PT is useful for treatment of viral and autoimmune diseases in dogs.
XX
PS Claim 8; Page 32; 51pp; Japanese.
XX
CC This sequence encodes the canine lymphocyte activation factor (CLAF) of
CC the invention. CLAF activates lymphocytes, especially canine cytotoxic T
CC cells. The protein contains a p35 and a p40 subunit. CLAF or antibodies
CC recognising it may be used in the treatment of viral diseases in dogs
CC (such as canine distemper, canine parvovirus and canine infectious
CC hepatitis). The antibodies may also be used in isolation of CLAF from
CC culture of the transformant host cells by affinity chromatography. The
CC p40 homodimer can be used for the treatment of autoimmune diseases in
CC dogs

   Feline interleukin 18 (IL-18), feline caspase-1, feline IL-12 single
   chain and canine IL-12 single chain proteins, useful for treating and
   preventing autoimmune diseases, inflammatory diseases and/or graft
   rejection in animals.

   Example 4; Page 78; 106pp; English.

   The present invention discloses new feline interleukin 18 (IL-18), feline
   caspase-1, feline IL-12 single chain and canine IL-12 single chain
   proteins. A composition comprising a feline IL-18, feline caspase-1,
   feline IL-12 single chain or canine IL-12 single chain proteins, a
   nucleic acid encoding these proteins, mimetopes of these proteins,
   multimeric forms of these proteins, an antibody against these proteins,
   or an inhibitor identified by its ability to inhibit the activity of
   these proteins, can be used to treat or prevent autoimmune diseases,
   allergic reactions, infectious diseases, tumour development, inflammatory
   diseases and/or graft rejection in animals. The present nucleic acid
   sequence represents a canine interleukin 12 DNA sequence, as described in
   the invention

    IL-12 protein can be used in therapeutic or prophylactic agents. The
    agents can be used to prevent and treat canine and feline immunological
    diseases including dog and cat tumours, skin diseases, viral infections
    and allergic diseases, especially tumours, breast tumour, oesinophilic
    granuloma, epidermoid tumour, skin tumour, lipoma, othematoma,
    pneumonoedema, skin soft pedicled soft tumour and anal tumour; skin
    diseases, otitis externa, dermatitis, eczema, fungal diseases of the
    skin, pyoderma, allergic dermatitis, nettle rash, traumatic dermatitis
    and hair loss; infections; dog Parvovirus infection and distemper virus,
    cat plaque virus infection and feline leukaemia, and allergic diseases,
    e.g. pollinosis

A prevention and treating agent containing interleukin 12 (CaIL12) - for prevention and treatment of dog and cat immune diseases.

Claim 1; Page 12; 16pp; Japanese.

The present sequence encodes canine interleukin-12 (IL-12). The specification describes a method for the prevention and treatment of dog and cat immune diseases. The treatment used an agent comprising dog IL-12 (CaIL12) proteins to form a heterodimer. The agent is useful for preventing and treating dog and cat immune diseases, including tumours, skin diseases, infectious diseases and allergic diseases

PT   Novel gene vector for expression in insect useful for expression of
PT   foreign gene such as dog interleukin 12 gene, comprises two promoters.
XX
PS   Claim 4; SEQ ID NO 5; 13pp; Japanese.
XX
CC   The invention relates to a novel gene vector for expression in an insect
CC   comprising at least two promoters, particularly the polyhedrin promoter
CC   and p10 promoter. The vector contains at least two types of foreign
CC   protein expression gene and the gene product of the vector is produced
CC   using a gene recombinant baculovirus, particularly a recombinant silkworm
CC   nuclear polyhedrosis virus. The baculovirus is proliferated in a
CC   silkworm. The vector of the invention may be useful for expression of a
CC   foreign gene, such as canine interleukin 12. Within the vector, two types
CC   of foreign protein expression genes are integrated simultaneously for
CC   their simultaneous expression. The current sequence is that of the canine
CC   interleukin-12 (IL-12) p40 DNA of the invention.

Feline interleukin 18 (IL-18), feline caspase-1, feline IL-12 single
chain and canine IL-12 single chain proteins, useful for treating and
preventing autoimmune diseases, inflammatory diseases and/or graft
rejection in animals.

Claim 6; Page 83-85; 106pp; English.

The present invention discloses new feline interleukin 18 (IL-18), feline
caspase-1, feline IL-12 single chain and canine IL-12 single chain
proteins. A composition comprising a feline IL-18, feline caspase-1,
feline IL-12 single chain or canine IL-12 single chain proteins, a
nucleic acid encoding these proteins, mimetopes of these proteins,
multimeric forms of these proteins, an antibody against these proteins,
or an inhibitor identified by its ability to inhibit the activity of
these proteins, can be used to treat or prevent autoimmune diseases,
allergic reactions, infectious diseases, tumour development, inflammatory
diseases and/or graft rejection in animals. The present nucleic acid
sequence represents a canine interleukin 12 DNA sequence, as described in
the invention

PT Feline interleukin 18 (IL-18), feline caspase-1, feline IL-12 single
PT chain and canine IL-12 single chain proteins, useful for treating and
PT preventing autoimmune diseases, inflammatory diseases and/or graft
PT rejection in animals.
XX
PS Claim 6; Page 86-87; 106pp; English.
XX
CC The present invention discloses new feline interleukin 18 (IL-18), feline
CC caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC proteins. A composition comprising a feline IL-18, feline caspase-1,
CC feline IL-12 single chain or canine IL-12 single chain proteins, a
CC nucleic acid encoding these proteins, mimetopes of these proteins,
CC multimeric forms of these proteins, an antibody against these proteins,
CC or an inhibitor identified by its ability to inhibit the activity of
CC these proteins, can be used to treat or prevent autoimmune diseases,
CC allergic reactions, infectious diseases, tumour development, inflammatory
CC diseases and/or graft rejection in animals. The present nucleic acid
CC sequence represents a canine interleukin 12 DNA sequence, as described in
CC the invention

Canine cytokine protein which activates canine cytotoxic T lymphocytes -
is useful for treatment of viral and autoimmune diseases in dogs.

Claim 8; Page 30-31; 51pp; Japanese.

This sequence encodes the canine lymphocyte activation factor (CLAF) of
the invention. CLAF activates lymphocytes, especially canine cytotoxic T
cells. The protein contains a p35 and a p40 subunit. CLAF or antibodies
recognising it may be used in the treatment of viral diseases in dogs
(such as canine distemper, canine parvovirus and canine infectious
hepatitis). The antibodies may also be used in isolation of CLAF from
culture of the transformant host cells by affinity chromatography. The
p40 homodimer can be used for the treatment of autoimmune diseases in
dogs

PT   Nucleic acids encoding modified cytokine polypeptides (i.e. modified p40
PT   and p35 polypeptides), useful for treating various diseases e.g. diabetic
PT   retinopathy and cancer.
XX
PS   Claim 1; Page 137; 223pp; English.
XX
CC   The invention relates to nucleic acids encoding modified cytokine
CC   polypeptides (i.e. modified p40 and p35 polypeptides). The modified
CC   cytokine polypeptides have T-cell proliferative and interferon (IFN)-
CC   gamma induction activities. The polypeptides and polynucleotides of the
CC   invention are useful for treating various diseases e.g. bacterial
CC   infections, AIDS, diabetic retinopathy and cancer. The polypeptide and
CC   polynucleotide may also be useful as a vaccine adjuvant, to enhance a
CC   vaccinated host's cell-mediated immunity for protective response to a
CC   pathogen. The present sequence is a modified human p40 protein encoding
CC   DNA

CC   The natural CLMF protein is a 75 kD heterodimer comprising two
CC   polypeptide subunits, a 40 kD and a 35 kD subunit (AAQ12150). The
CC   subunits are bonded together via one or more disulfide bonds. The CLMF
CC   can interact with IL-2 to synergistically induce the cytolytic activity
CC   of Lymphokine Activated Killer (LAK) cells. It is also capable of
CC   stimulating T-cell growth. It can be used for the prepn. of LAK- and T-
CC   cell activator and antitumour compsns. and for stimulating Natural Killer
CC   (NK) cells

   Novel protein comprising cytotoxic lymphocyte maturation factor in
   substantially pure form or protein which exhibits cytotoxic lymphocyte
   maturation factor activity, useful as antitumor and immunoenhancing
   agent.

   Claim 17; Page 28-29; 74pp; English.

   The invention relates to a protein which comprises a cytotoxic lymphocyte
   maturation factor (CLMF). The protein is useful for stimulating activated
   T-cells which involves treating T-cells with the protein. The method
   further involves treating the activated T-cells with IL2 or its
   biologically active fragment. The protein is useful for stimulating
   natural killer cells which involves treating the natural killer cells
   with the protein. The protein has immunoenhancing and antitumour effects
   when used as single therapeutic agent in vivo. The present sequence is
   used in the exemplification of the present invention.

CC   AAQ97484 and AAQ97485 are from human lymphoblast cell line RMPI 8866. IL-
CC   12 is a heterodimeric cytokine which was originally identified as a
CC   factor which induces gamma-interferon from T cells and natural killer
CC   cells as set forth in PCT/US91/06332, published April 2 1992, and
CC   incorporated by reference. EP 433827, published June 26 1991, disclosed
CC   IL-12 as a cytotoxin lymphocyte maturation factor. In the patent, IL-12
CC   is defined as a heterodimeric glycoprotein comprised of two covalently
CC   linked subunits having mol. wts of about 40 kD and 35 kD. The two
CC   subunits may be disulfide-bonded. IL-12 is administered to prevent or
CC   ameliorate GVHD. Dosage is 1 ng-0.1 mg (esp. 1.0 ng-1 microg)/kg daily
CC   for 3 days, the first dose given 1 hr. after transplant. IL-12 can be
CC   used as the native heterodimer or as subunits. (Updated on 25-MAR-2003 to
CC   correct PN field.)

Therapy of graft-versus-host disease - by administration of interleukin-12 to maintain and/or promote graft-versus-leukaemia effects.

Disclosure; Col 17-20; 20pp; English.

The invention relates to a method for the treatment or prevention of graft-versus-host disease (GVHD) which comprises the administration of interleukin-12 (IL-12) at the time of bone-marrow transplantation to maintain or promote graft-versus-leukaemia effects. Preferably, dosage is 0.001-100 (preferably 1-100) mu g/kg for 3 days starting on the day of the bone marrow transplant. IL-12 is administered daily until there is an improvement in the condition. Administration is oral, cutaneous, subcutaneous, intravenous or by inhalation preferably subcutaneous, or intravenous. The present sequence encodes the human interleukin-12 40kDa subunit

PT New plasmids containing an interferon-alpha coding sequence, used for the
PT treatment of a mammalian condition or disease, particularly cancer.
XX

Claim 11; Page 43-45; 137pp; English.

This sequence represents an optimised coding region for the human interleukin 12 p40 subunit. The invention relates to a novel plasmid comprising a cytomegalovirus (CMV) promoter transcriptionally linked with an interferon alpha (IFN-alpha) coding sequence, and a growth hormone 3'-untranslated region (UTR). The plasmids can be used for treating a mammalian condition or disease, particularly cancer

Nucleic acids encoding modified cytokine polypeptides (i.e. modified p40 and p35 polypeptides), useful for treating various diseases e.g. diabetic retinopathy and cancer.

Claim 5; Page 142; 223pp; English.

CC The invention relates to nucleic acids encoding modified cytokine polypeptides (i.e. modified p40 and p35 polypeptides). The modified cytokine polypeptides have T-cell proliferative and interferon (IFN)-gamma induction activities. The polypeptides and polynucleotides of the invention are useful for treating various diseases e.g. bacterial infections, AIDS, diabetic retinopathy and cancer. The polypeptide and polynucleotide may also be useful as a vaccine adjuvant, to enhance a vaccinated host's cell-mediated immunity for protective response to a pathogen. The present sequence is human p40 protein encoding DNA

Novel anti-tumor agent comprising interleukin-23 gene, or cell transduced with interleukin-23 gene, as active ingredient, useful for activating anti-tumor immune response and treating tumor.

Disclosure; SEQ ID NO 2; 23pp; Japanese.

The invention relates to a novel anti-tumour agent comprising an interleukin-23 (IL-23) gene, or a cell transduced with an IL-23 gene, as an active ingredient. The molecules of the invention demonstrate cytostatic and immunostimulant activities and may be useful within an anti-tumour agent which activates an anti-tumour immune response. The agent is safe when used in cancer treatment, may be combined with other treatments and induces tumour-specific acquired immunity. The current sequence is that of the human interleukin-23 (IL-23) p40 subunit DNA of the invention.

   Pharmaceutical formulation for inhibiting immune response generated by
   interleukin-23 (IL-23) and treating e.g. autoimmune diseases, comprises
   p40 molecules or gene encoding p40 molecules.

   Claim 3; SEQ ID NO 1; 12pp; Japanese.

   This invention relates to a novel pharmaceutical formulation used for
   inhibiting the immune response generated by interleukin-23 (IL-23).
   Specifically, it refers to a formulation comprising the p40 protein or
   the gene encoding this protein thereof. The present invention describes
   the p40 gene contained in the form of a viral or non-viral vector that is
   capable of expressing and secreting the p40 protein. This vector can be
   introduced into a cell such that it can in turn inhibit the immune
   response generated by the production of IL-23. Accordingly, this method
   is useful for suppressing organ transplant rejection or treating
   immunological disorders associated with abnormal immune response with
   regard to IL-23. Furthermore, it can be used to treat autoimmune diseases
   and allergy. As such, compositions exhibit immunosuppressive and
   antiallergic activities. This polynucleotide sequence is the human p40
   gene of the invention.

PT   Novel compound comprising target specific portion having monoclonal
PT   antibody having specificity for oncofetal fibronectin and effector
PT   portion having interleukin-12, useful for treating cancer e.g.
PT   glioblastoma.
XX
PS   Claim 36; SEQ ID NO 10; 83pp; English.
XX
CC   The invention provides a compound comprising a target specific portion
CC   and an effector portion, in which the target specific portion comprises
CC   or consists of a monoclonal antibody having specificity for oncofetal
CC   fibronectin, or its fragment or variant which retains the antigen binding
CC   specificity of the parent monoclonal antibody, and the effector portion
CC   comprises or consists of interleukin-12, or its functional fragment or
CC   variant. The monoclonal antibody binds to a region of oncofetal
CC   fibronectin other than the extra-domain B region. Preferably, the
CC   compound comprises a target specific portion that is capable of binding
CC   to an amino acid sequence present in fibronectin expressed in both fetal
CC   and normal adult tissue, especially the repeat 7 domain of fibronectin,
CC   and is preferably specific for human oncofetal fibronectin. The
CC   monoclonal antibody is preferably a BC1 antibody. The invention also
CC   provides nucleic acids encoding the compounds of the invention and
CC   methods of their use in the production of these compounds, as well as
CC   methods of using the compounds in medicine, especially for the treatment
CC   of cancer in a patient, where the patient is a mammal, preferably a
CC   human, and the patient has a solid tumor. The cancer is a glioblastoma
CC   (claimed) or ovarian, gastric, colorectal or pancreatic cancer. The
CC   present sequence is the coding sequence of the p40 domain of human
CC   interleukin-12. In a claimed compound, the effector portion consists of a
CC   single chain interleukin-12 comprising or consisting of an interleukin-12
CC   p40 domain conjugated to the interleukin-12 and p35 domain AEB48815 via a
CC   disulfide bond. A further claimed compound comprises the p40 sequence
CC   linked by disulfide bond to a fusion protein AEB48818 comprising the BC1
CC   heavy chain fused to human interleukin-12 p35.

   Novel human or mouse interleukin (IL)-12p40 subunit mutant genes, that
   inhibit secretion of IL-12p40, but normally secrete IL-12p70, useful as
   adjuvant for DNA vaccination and gene therapy to AIDS, cancer, malaria.

   Claim 1; Page 89-90; 103pp; English.

   The invention relates to mutant interleukin (IL)-12p40 subunit genes
   which produces highly active human or mouse IL-12p40 sequence. IL-12p40
   DNA is useful for DNA immunisation or gene therapy for treating diseases
   such as cancer, AIDS, hepatitis C, hepatitis B or influenza, malaria or
   tuberculosis, as an therapeutic or prophylactic adjuvant. IL-12p40 DNA
   induces immune response by increasing the hydrolysis activity of
   cytotoxic T lymphocytes when IL-12p40 subunit gene is injected with the
   DNA vaccine, or increasing secretion of interferon (IFN)-gamma from T
   helper cells or CD8+ T cells when IL-12p40 subunit gene is injected with
   DNA vaccine. IL-12p40 DNA is useful in gene therapy and as a DNA vaccine.
   The present sequence is a DNA encoding human Interleukin (IL)-12p40
   subunit protein

XX
CC   The sequences given in AAQ67879-80 are expression cassettes which contain
CC   the p40 and p35 subunits of human interleukin-12 (IL-12) under the
CC   control of the entomopox virus (EPV) promoter and the vaccinia E3L
CC   promoter, respectively. These sequences were used in the construction of
CC   an ALVAC-based recombinant virus containing the genes for the two
CC   subunits of human IL-12. The p40 subunit was amplified using primers
CC   JP202 and JP189 and placed under the control of the entomopox virus (EPV)
CC   42 kD promoter in plasmid PBSHIL12p40II. The p35 subunit was amplified
CC   using primers JP186 and JP201 and placed under the control of the
CC   vaccinia E3L promoter using primers JP218 and JP220. The expression
CC   cassette was isolated and ligated with pBSSK+ generating plasmid
CC   PBSHIL12p35II. The p35 and p40 expression cassettes were excised and
CC   assembled in pBSSK+ to give PBSHIL12 in which the two expression
CC   cassettes are orientated head-to-head relative to each other. The
CC   combination casette containing the poxvirus promoted genes for both IL-12
CC   subunits was excised from PBSHIL12 and cloned in to ALVAC C6 vector
CC   plasmid pC6L to give pC6HIL12. Recombination between this donor plasmid
CC   and ALVAC rescuing virus produced recombinant virus ALVAC+IL12, which
```

contains both the human IL-12 genes in the C6 locus. The resulting virus may be used in a composition for inducing an antigenic or immunological response, ie. for immunisation against pathogens. (Updated on 25-MAR-2003 to correct PN field.)

PT Recombinant poxviruses comprising exogenous DNA encoding antigenic
PT determinants useful in immunotherapy to immunize against cancers and
PT other diseases such as influenza, Newcastle Disease and rabies.
PS Example 27; Fig 33; 163pp; English.
CC The present invention describes a recombinant poxvirus (I), comprising
CC exogenous DNA encoding an antigenic determinant of a pathogen which is
CC then expressed in vivo in infected host cells after administration to a
CC patient and therefore induces an immunological response. (I) may be used
CC to vaccinate patients against a wide range of diseases and disorders
CC depending on the type of antigen encoded by the exogenous DNA. (I) may be
CC used to vaccinate against diseases such as rabies, influenza and
CC Newcastle Disease. It is particularly useful for immunising against
CC cancers. The poxvirus (I) also provides a means of manipulating
CC lymphocytes and tumour cells for use in cell-based immunotherapeutic
CC modalities for cancer. (I) also have enhanced safety compared to
CC unattenuated viruses (attenuation reduces the virulence of the viruses)
CC and known recombinant poxvirus vaccines. This increased level of safety
CC reduces the possibility of a 'runaway' infection in the host and reduces
CC the chance of transmission from vaccinated to unvaccinated individuals
CC and contamination of the environment. The present sequence represents a
CC EPV 42 kDa/human IL-12 P40 expression cassette used in the
CC exemplification of the present invention

WPI; 2004-601998/58.

New recombinant poxvirus which is an attenuated avipox Virus that expresses an exogenous DNA encoding carcinoembryonic antigen and an exogenous DNA encoding B7 protein, useful for cancer therapy.

Example 27; SEQ ID NO 194; 181pp; English.

The invention describes a recombinant poxvirus containing exogenous DNA in a nonessential region of the poxvirus, where the poxvirus is an attenuated avipox Virus that expresses an exogenous DNA encoding carcinoembryonic antigen and an exogenous DNA encoding B7 protein. Also described are: a composition comprising a poxvirus above in admixture with a carrier; and expressing carcinoembryonic antigen and B7 protein in vivo comprising administering to a mammal the composition above. Disclosed are: making recombinant poxvirus defined above; recombinant poxvirus vaccine having an increased level of safety compared to known recombinant poxvirus vaccines; and a modified vector for expressing a gene product in a host. The recombinant poxvirus is useful for providing a recombinant poxvirus vaccine having an increased level of safety compared to known recombinant poxvirus vaccines. The recombinant poxvirus is useful for cancer therapy. This sequence represents a human IL-12 expression cassette used in the creation of NYVAC rescue virus and canarypox virus vector ALVAC comprising the human IL-12 gene.

XX
CC The present invention relates to an expression vector comprising DNA
CC encoding a subunit of a dimeric form of interleukin under transcriptional
CC control of an ecdysone-inducible promoter. The expression vector is
CC useful in preparing a composition for treating a disease having a
CC pathogenesis which includes endogenous production of cytokine IL-12, IL-
CC 23 or IL-27, e.g., infectious diseases, bacterial, protozoal or virus-
CC induced inflammation, epithelial airway inflammation such as asthma,
CC allergic disease, or autoimmune disease such as multiple sclerosis or
CC inflammatory bowel disease. The present sequence is the coding sequence
CC of the human interleukin-12 beta chain used in the exemplification of the
CC invention.

Novel multifunctional fusion protein or protein complexes useful for treating cancer and viral infections, comprise two different cytokine molecules and a targeting group.

Example 1; Page 75-76; 90pp; English.

The present sequence is given in a specification relating to multifunctional fusion proteins and protein complexes comprising at least two different cytokine molecules and a targeting group such as an immunoglobulin. The fusion proteins and protein complexes are useful for treating cancers, and bacterial, viral, fungal and parasitic infections. They are also useful in gene therapy and as vaccines to prevent or treat various diseases

PT Antibodies to cytotoxic lymphocyte maturation factor protein - useful as affinity ligands, assay reagents and medicaments.
XX
PS Disclosure; Fig 25; 80pp; English.
XX
CC The present DNA sequence encodes the 40 kDa subunit of cytotoxic lymphocyte maturation factor (CLMF) protein. The natural CLMF protein is a 75 kDa heterodimer, where the 2 subunits (see AAT77850 for the 35 kDa subunit) are bonded together via one or more disulphide bonds. CLMF protein is produced by a human B lyphoblastoid cell line. CLMF synergistically induces, in the presence of interleukin-2, the cytolytic activity of lymphokine activated killer cells. CLMF is also capable of stimulating T-cell growth. A novel antibody directed against an epitope of CLMF protein (see AAW24237 for epitope) is capable of neutralising and/or inhibiting CLMF bioactivity. This antibody may be used as an affinity ligand for purifying the CLMF protein. The antibody can also be used as an assay reagent for detecting the CLMF protein, and as a medicament for selectively blocking the proliferation and activation of cytotoxic T cells, e.g. in transplantation. New antibodies to cytotoxic lymphocyte maturation factor - useful for detecting, purifying, and/or blocking proliferation and activation of cytotoxic T cells, such as in transplantation(s).

Example 10; Fig 25; 71pp; English.

An isolated antibody has been developed which binds specifically to cytotoxic lymphocyte maturation factor (CLMF) and neutralises CLMF induced proliferation by more than 50% in a CLMF dependent T cell growth assay and/or inhibits binding of at least 60% of the factor to phytohaemagglutinin (PHA) activated peripheral blood lymphocyte (PBL) blasts as determined in a CLMF receptor binding assay. CLMF is a heterodimeric protein having a molecular weight band of 75 kD, determined by sodium dodecyl sulphate-polyacrylamide gel electrophoresis (SDS-PAGE) under non-reducing and/or reducing conditions, providing a first subunit having a molecular weight band of 40 kD and a second subunit having a molecular weight of 35 kD. The present sequence encodes the CLMF 40 kD subunit, from an example of the present invention. The antibody can be used for the purification and/or detection of CLMF. It is also used in therapeutic treatments which require selective blocking of proliferation and activation of cytotoxic T cells (CTLs) such as in transplantation

PT Novel protein comprising cytotoxic lymphocyte maturation factor in
PT substantially pure form or protein which exhibits cytotoxic lymphocyte
PT maturation factor activity, useful as antitumor and immunoenhancing
PT agent.
XX
PS Disclosure; Fig 25; 74pp; English.
XX
CC The invention relates to a protein which comprises a cytotoxic lymphocyte
CC maturation factor (CLMF). The protein is useful for stimulating activated
CC T-cells which involves treating T-cells with the protein. The method
CC further involves treating the activated T-cells with IL2 or its
CC biologically active fragment. The protein is useful for stimulating
CC natural killer cells which involves treating the natural killer cells
CC with the protein. The protein has immunoenhancing and antitumour effects
CC when used as single therapeutic agent in vivo. The present sequence is
CC used in the exemplification of the present invention.

   Pharmaceutical composition useful for activating T cell growth factors in
   assays comprises heterodimeric protein comprising first and second
   subunits and carrier.

   Disclosure; Fig 25; 72pp; English.

   The invention describes a pharmaceutical composition active in a T cell
   growth factor assay. The pharmaceutical composition comprises a
   heterodimeric protein having a molecular weight of 75 kDa as determined
   by Sodium dodecyl sulfate polyacrylamide gel electrophoresis (SDS-PAGE)
CC under non-reducing conditions, and under reducing conditions, providing a
CC first subunit having a molecular weight of 40 kDa as determined by (SDS-
CC PAGE), and having a fully defined sequence of 306 amino acids as given in
CC the specification, and second subunit having a molecular weight of 35 kDa
CC as determined by (SDS-PAGE). Also described are: a novel cytokine protein
CC called Cytokine lymphocyte maturation factor (CLMF) or interleukin-12 (IL
CC -12) synthesised by mammalian cells, particularly human NC-37 B
CC lymphoblastoid cells, and capable of stimulating T-cell growth; and
CC monoclonal antibodies directed against (CLMF). (I) is useful as a
CC pharmaceutical composition which is active in a T cell growth factor
CC assay. This sequence encodes human cytotoxic lymphocyte maturation factor
CC (CLMF) 40 kDa subunit.

PT   Nucleic acid constructs encoding interleukin-12 fusion proteins useful
PT   for treating leukemia and other cancers.
XX
PS   Example; Fig 9; 73pp; English.
XX
CC   This sequence encodes the human p40 protein sequence. The invention
CC   relates to an isolated nucleic acid construct (I) comprising a region
CC   encoding an interleukin-12 (IL-12) fusion protein (comprising an IL-12
CC   p35 subunit, an IL-12 p40 subunit and a linker peptide (joining the
CC   subunits)) and a region encoding a B7 protein. (I) may be used to produce
```

IL-12 fusion proteins according to standard recombinant DNA methodologies. The fusion proteins may be produced either in vitro in a fermentation culture or in vivo as part of a gene therapy protocol (in this case (I) is used to transform a patients cells, which then secrete the functional polypeptide to supplement the patients own production of IL-12 or to rectify mutations which lead to the expression of inactive polypeptides). The fusion proteins produced in this way may be used to treat any disease which responds to IL-12 such as tumours (both solid and dispersed of the kidney, breast, colon, ovarian and cervical tumours and melanomas) and in particular, tumours of the blood such as leukaemia. Alternatively, the polypeptides may be used as antigens in the production of antibodies to IL-12 and to assay for agonists and antagonists of its activity. The antibodies and antagonists may be used to inhibit the activity of IL-12. (I) may also be used diagnostically as a probe which hybridizes to sequences encoding IL-12 and the antibodies may be used to detect the presence of IL-12 polypeptides in samples. They may be used diagnostically to quantitate the expression of the polypeptide by patients and hence which subjects may be in need of restorative therapy

Monitoring multiple sclerosis patient taking beta-interferon or glatiramer acetate to predict treatment response by determining expression profile of inflammatory nucleic acids using RNA of patient and comparing to control.

PT
XX
PS Claim 1; SEQ ID NO 22; 73pp; English.
XX
CC The present invention relates to gene expression profiling technology to
CC quantatively measure the expression profiles of genes selected based on
CC their role in inflammation and their susceptibility to regulation by
CC current multiple sclerosis (MS) treatment agents by isolating RNA from
CC peripheral blood mononuclear cells (PBMC) of patient. The invention is
CC particularly useful for monitoring a multiple sclerosis patient taking
CC interferon-beta (IFN-beta) or glatiramer acetate (GA) in order to predict
CC treatment response. The present sequence is human interleukin-12 40 kDa
CC (IL-12 p40) subunit gene. This gene is used to illustrate the evaluation
CC of PBMC responses to in Vitro treatment with IFN-beta or GA agents by
CC gene expression profiling technology.

Recombinant adenovirus expressing human interleukin-12 and its preparation and use.

Example 3; Fig 4; 27pp; Chinese.

The present invention describes a recombinant adenovirus and its preparation and use, as well as medicine composite containing the recombinant adenovirus. The recombinant adenovirus is used clinically, has the advantages of low cost, easy use and high efficiency and is especially suitable for immune treatment of tumour and infectious diseases caused by bacteria, virus and parasite. The present sequence represents human interleukin 2 (IL-2) cDNA which encodes the p35 and p40 proteins, which is used in an example from the present invention

Hybrid adenoviral gene expression vector for treating cancer, comprises adenovirus liberation system, alpha virus derived vector and specific tumoral promoter.

Disclosure; SEQ ID NO 13; 149pp; Spanish.

The invention relates to a novel adenovirus/alphavirus hybrid vector used in the expression of therapeutic genes in tumor cells. The vector comprises: a first chain of adenoviral origin containing a first inverted terminal repeated sequence and a signal sequence for packing the

CC adenovirus; a first non-coding filler sequence; a sequence corresponding
CC to a specific tissue promoter; an alpha virus-derived cDNA chain, the
CC sequence of which is in part complementary to an alpha viral RNA,
CC comprising at least one sequence coding for at least one exogenous gene
CC of interest, a polyadenylation sequence and a second adenoviral ITR
CC sequence. The invention further includes pharmaceutical compositions
CC containing the vector. The novel vector is used to transfer genetic
CC material to a cell, preferably a tumoral cell, especially one which
CC expresses an alfa fetoprotein (AFP). The vector is used to prepare drugs
CC for treating tumors. The vector or pharmaceutical compositions containing
CC them can be used to induce an immune response against foreign antigens.
CC This gene therapy method can be used to treat cancer. This polynucleotide
CC represents a human interleukin-12 DNA sequence used in the construction
CC of a novel vector of the invention.

XX

The present invention relates to a polypeptide comprising an antiangiogenesis polypeptide region linked to a therapeutic protein or polypeptide region, or a diagnostic protein or polypeptide region. The polypeptide comprising an antiangiogenesis polypeptide region or the nucleic acid encoding the polypeptide comprising the antiangiogenesis polypeptide is useful for diagnosing or treating angiogenesis-dependent diseases or cancer. Angiogenesis-dependent diseases include age-related macular degeneration, artherosclerosis, angiofibroma, neovascular glaucoma, arteriovenous malformations, nonunion fractures, arthritis, rheumatoid arthritis, lupus, connective tissue disorders, Osler-Weber syndrome, psoriasis, corneal graft neovascularisation, pyogenic granuloma, delayed wound healing, retrolental fibroplasia, diabetic retinopathy, scleroderma, granulations, haemangioma, trachoma, haemophilic joints, vascular adhesions, hypertrophic scars, multiple sclerosis, restenosis or obesity. The present sequence is a coding sequence shown in the exemplification of the invention

/note="Vector: pDNR-Dual; Site_1: loxP-SalI; Site_2: loxP-HindIII; Clones from this library have been PCR-amplified using gene-specific primers to contain the complete open reading frame (based on known gene sequences available from NCBI's RefSeq). Template for PCR is cDNA derived from either pooled cytoplasmic polyA RNA from 30 cells lines or pooled total RNA from 10 different tissues (from BD Biosciences/Clontech and Washington University). PCR products are directionally cloned into the loxP sites of the pDNR-Dual vector. Library constructed by Dr. Narayan Bhat, Earl Bere III and Hongling Liao (Gene Expression Laboratory, Research Technology Program, SAIC Frederick, NCI-Frederick, Frederick, MD 21702). For information on which gene each clone represents, please visit our anonymous ftp site at ftp://image.llnl.gov/image/rearrayed_plates/IRBK.preSV.dat a Note: this is a NIH_MGC Library."

TITLE Direct Submission

JOURNAL Submitted (14-APR-2004) Yoshihide Hayashizaki, The Institute of Physical and Chemical Research (RIKEN), Laboratory for Genome Exploration Research Group, RIKEN Genomic Sciences Center (GSC), RIKEN Yokohama Institute; 1-7-22 Suehiro-cho, Tsurumi-ku, Yokohama, Kanagawa, 230-0045, Japan (E-mail:genome-res@gsc.riken.jp, URL:http://genome.gsc.riken.jp/, Tel:81-45-503-9222, Fax:81-45-503-9216)

COMMENT cDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues.
Please visit our web site for further details.

Computational Analysis of Full-Length Mouse cDNAs Compared with Human Genome Sequences Mamm. Genome. 12, 673-677 (2001)
Normalization and subtraction of cap-trapper-selected cDNAs to prepare full-length cDNA libraries for rapid discovery of new genes. Genome Res. 10 (10), 1617-1630 (2000)
RIKEN integrated sequence analysis (RISA) system--384-format sequencing pipeline with 384 multicapillary sequencer. Genome Res. 10 (11), 1757-1771 (2000)
Computer-based methods for the mouse full-length cDNA encyclopedia: real-time sequence clustering for construction of a nonredundant cDNA library. Genome Res. 11 (2), 281-289 (2001)
cDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues.
Tissues were provided by David A. Hume (Depts. of Biochemistry and Microbiology/Parasitology Institute for Molecular Bioscience University of Queensland Brisbane,Q 4072 Australia) whose assistance we gratefully acknowledge.
Please visit our web site (http://genome.gsc.riken.go.jp) for further details.

Ovarian tissue (whole ovary, dissected follicles, or corpora lutea) was collected from crossbred pigs (Sus scrofa domestica), frozen in liquid nitrogen shortly after collection, and stored at -80 degrees Celsius until RNA extraction. The tissue from several individual pigs was pooled for the purpose of RNA extraction. The specific tissues collected were fetal whole ovary; neonatal whole ovary; prepubutal whole ovary; 2, 4, 6 and 8 mm growing follicles; Day 0 follicles; Day 5 small antral follicles and corpora lutea; Day 12 corpora lutea and Day 12 follicles. More information regarding the methods can be found at:
http://genome.rnet.missouri.edu/Swine/Methods.html.
Library Construction (Standard Protocol): All procedures discussed in this section have been described in detail elsewhere (Soares et al., 1994; Bonaldo et al., 1996; Jiang et al., 2001). Total cellular RNA from each sample was isolated by using STAT-60 reagent (Tel-Test, Friendswood, TX) and the poly(A)+ RNA was obtained by two rounds of purification with the Oligotex mRNA isolation kit (Qiagen) according to the manufacturer's instructions. The libraries were constructed essentially as described by the manufacturer's instructions provided with the SuperScript Plasmid System (Invitrogen, cat. no. 18248-013). Briefly, 1mg of poly(A)+ RNA will be annealed at 37 degrees Celsius with 10mg of NotI-tag-dT18 oligonucleotide (GCTGCTCGCGGCCGC-tag-T18) and reverse transcribed at 37 degrees Celsius with SuperScript II (Invitrogen) reverse transcriptase (Jiang et al., 2001). The 'tag' represents a tissue/stage-specific ten-base sequence identifier (http://genome.uiowa.edu/pubsoft/software.html) present in the oligonucleotide used to prime first-strand synthesis. Second strand synthesis was performed with T4 DNA polymerase in the presence of DNA ligase and RNase H. After second strand synthesis, the double-stranded cDNAs was ligated to SalI adapters (Invitrogen-Life Technologies) and digested with NotI. The cDNAs will be size selected by passage through cDNA size fractionation columns (Invitrogen-Life technologies). The cDNAs derived from each developmental stage of a particular tissue were mixed on an equimolar basis and ligated directionally into the NotI and SalI sites of the pSPORT1 vector (Invitrogen). After ligation of the inserts, the plasmids will be electroporated into DH10B bacteria. Preliminary Library Characterization: Randomly chosen clones from each library were analyzed by restriction digestion to determine average insert size (96 clones) and by sequencing (~4 96-well plates) to confirm library quality [e.g. the presence of short polyA+ tails, genomic DNA contamination (must be <1%), ribosomal RNA clones (must be <1%), etc.] and to provide a sequence database representing the predominant clones in each library. The clones were sequenced at the University of Missouri-Columbia DNA Core Facility. Bioinformatics work was performed by GK Springer's bioinformatics group (WG Spollen, JE Ries, A Guillen, AA Khambati, RV Patel, CM Topinka, SB Bhuiyan) in Computer Science and Health Management and Informatics Departments at the University of Missouri-Columbia. Clone Requests: Requests for clones should be made to the Director of the University of Missouri DNA Core facility at: porcine@rnet.missouri.edu. Citations: 1. Bonaldo MF, Lennon G, Soares MB.                      /clone_lib="Mouse 10kb plasmid UUGC1M library"
                     /note="Vector: PWD42nv; Purified genomic DNA from M.
                     musculus C57BL/6J (male) was obtained  from the Jackson
                     Laboratory Mouse DNA Resource
                     (http://www.jax.org/resources/documents/dnares/). The DNA
                     was hydrodynamically sheared by repeated passage through a
                     0.005 inch orifice at constant velocity. The sheared DNA
                     was blunt end-repaired with T4 DNA polymerase and T4
                     polynucleotide kinase. Adaptor oligonucleotides were
                     ligated to the blunt ends in high  molar excess. The
                     adaptored DNA was purified and size-selected for a 9.5 to
                     10.5 kb range using preparative agarose gel
                     electrophoresis. Vector DNA was prepared from a derivative
                     of pWD42 (gi|4732114|gb|AF129072.1), a copy-number
                     inducible derivative of plasmid R1. The vector was ligated
                     with adaptors complementary to the insert adaptors and
                     purified. The sheared, adaptored mouse DNA was annealed to
                     adaptored vector DNA, and transformed into
                     chemically-competent E. coli XL10-Gold (Stratagene) cells
                     and selected for ampicillin resistance."

encyclopedia: real-time sequence clustering for construction of a nonredundant cDNA library. Genome Res. 11 (2), 281-289 (2001)
cDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues.
Tissues were provided by Dr. John Todd (Dept. of Medical Genetics Wellcome Trust Centre for Molecular Mechanisms in Disease Wellcome Trust/MRC building Addenbrookes Hospital Cambridge) whose assistance we gratefully acknowledge.
Please visit our web site (http://genome.gsc.riken.go.jp) for further details.

                  Laboratory Mouse DNA Resource
```

(http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (gi|4732114|gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

MENT     PCR was performed on DNA from transformants of Arabidopsis thaliana
         plants from INRA (Versailles). The DNA fragment(s) resulting from
         the PCR were directly sequenced from the left or the right border
         to determine the genomic sequence flanking the insertion. T-DNA
         derived sequences were removed. Information to order the
         corresponding mutant line and a link to a database providing a
         graphical display of the insertion site are available at
         http://dbsgap.versailles.inra.fr/publiclines/. This sequence has
         been generated in the framework of the French plant genomics
         program 'Genoplante' (http://www.genoplante.com and
         http://genoplante-info.infobiogen.fr).

                /note="Organ: Left Pelvis; Vector: pT7T3-Pac (Pharmacia)
                with a modified polylinker; Site_1: EcoR I; Site_2: Not I;
                NCI_CGAP_Ch1 is a cDNA library containing the following
                tissue(s): Chondrosarcoma Grade II. The library was
                constructed according to Bonaldo, Lennon and Soares,
                Genome Research, 6:791-806, 1996. First strand cDNA
                synthesis was primed with an oligo-dT primer containing a
                Not I site. Double stranded cDNA was ligated to an EcoR I
                adaptor, digested with Not I, and cloned directionally
                into pT7T3-Pac vector. The oligonucleotide used to prime
                the synthesis of first-strand cDNA contains a library tag
                sequence that is located between the Not I site and the
                (dT)18 tail. The sequence tag for this library is
                TGATCACGCT.
                TAG_TISSUE=grade-2-chondrosarcoma
                TAG_LIB=UI-H-EZ0

                        /clone_lib="NCI_CGAP_ED0"
                        /note="Organ: Left Pubic Bone; Vector: pT7T3-Pac
                        (Pharmacia) with a modified polylinker; Site_1: EcoR I;
                        Site_2: Not I; NCI_CGAP_ED0 is a cDNA library containing
                        the following tissue(s): Chondrosarcoma cell line CS5. The
                        library was constructed according to Bonaldo, Lennon and
                        Soares, Genome Research, 6:791-806, 1996. First strand
                        cDNA synthesis was primed with an oligo-dT primer
                        containing a Not I site. Double stranded cDNA was ligated
                        to an EcoR I adaptor, digested with Not I, and cloned
                        directionally into pT7T3-Pac vector. The oligonucleotide
                        used to prime the synthesis of first-strand cDNA contains
                        a library tag sequence that is located between the Not I
                        site and the (dT)18 tail. The sequence tag for this
                        library is GCTCAAGGCT.
                        TAG_TISSUE=chondrosarcoma
                        TAG_LIB=UI-H-ED0
                        TAG_SEQ=CGTCAAGGCT"

```

derived from a pool of mRNA obtained from 4 cell lines from grade III chondrosarcoma tissues. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is GAGGTCGGTG. The cell lines were provided by Dr. James Martin from the University of Iowa.

EST project with full-length enriched cDNA libraries carried out in Animal Genome Research Program (Japan) by National Institute of Agrobiological Sciences and STAFF-Institute
Single pass sequencing of clones derived from oligo-capped cDNA library
Vector sequences were eliminated by RepeatMasker version 2002/07/13 and crossmatch version 0.990319
Low quality bases were trimmed based on the quality values.

                     /clone_lib="Hordeum vulgare seedling shoot EST library
                     HVcDNA0003 (Etiolated and unstressed)"
                     /note="Vector: lambdaZAP; Site_1: EcoR1; Site_2: Xho1;
                     Seeds were surface sterilized then germinated under axenic
                     conditions in the dark at room temperature on filter paper
                     with water, nystatin and cefotaxime in covered
                     crystallization dishes. Five-day old seedling shoots were
                     then harvested, total RNA was prepared, poly(A) RNA was
                     purified, one primary unamplified cDNA library was made,
                     and 1 million pfu were in vivo excised to give pBluescript
                     SK(-) cDNA phagemids. These steps were performed in the TJ
                     Close laboratory at the University of California,
                     Riverside (Choi, Close, Fenton). Phagemids were plated and
                     picked at the Clemson University Genomics Institute (CUGI)
                     (Begum, Palmer, Frisch, Atkins and Wing). Plasmid DNA
                     preparations, DNA sequencing and sequence analysis were
                     performed at CUGI (Wing, Yu, Frisch, Henry, Simmons,
                     Oates, Rambo, Main). The sequence has been trimmed to
                     remove vector sequence and contains a minimum of 100 bases
                     of phred value 20 or above. For more details on library
                     preparation and sequence analysis see
                     http://www.genome.clemson.edu/projects/barley. To order
                     this clone see http://www.genome.clemson.edu/orders Also

                     /note="Vector: pGEMZf11; Funding for EST sequencing was
                     provided by funds dedicated to J.P.RENARD (BDR, Inra).
                     Funding for construction and subtraction of the cDNA
                     library was provided by USDA ARS contract No 58-1275-2-020
                     to H. A. Lewin The cDNA library was constructed,
                     normalized and subtracted by Dr. A. Hernandez (W.M. Keck
                     Center, University of Illinois Urbana-Champaign) and S.
                     Degrelle (BDR, Inra) as described in Bonaldo et al.(1996),
                     Genome Research 6, 791-806. BE03 library is a normalized
                     library of embryonic tissues subtracted with 7800 known
                     EST sequences. The double-stranded cDNA was size selected
                     (>450 bp), adaptored with EcoRI adaptors at both ends and
                     digested with NotI. The cDNA was then directionally cloned
                     into EcoRI-NotI digested pGEM11Zf(+) phagemid vector.
                     Insert size was between 450-2200 bp. Tagged oligo-dT was
                     used to identify the origin of the ESTs where possible.

US-09-917-265A-29
; Sequence 29, Application US/09917265A
; Patent No. 6818444
; GENERAL INFORMATION:
;  APPLICANT: Wonderling, Ramani S.
;  APPLICANT:  Boroughs, Karen L.
;  TITLE OF INVENTION: CANINE AND FELINE PROTEINS, NUCLEIC ACID MOLECULES AND USES
;  TITLE OF INVENTION:  THEREOF
;  FILE REFERENCE: IM-5
;  CURRENT APPLICATION NUMBER: US/09/917,265A
;  CURRENT FILING DATE:  2001-07-27
;  PRIOR APPLICATION NUMBER: 60/223,016
;  PRIOR FILING DATE: 2000-08-04
;  NUMBER OF SEQ ID NOS: 111
;  SOFTWARE: PatentIn version 3.2
; SEQ ID NO 29
;   LENGTH: 987
;   TYPE: DNA
;   ORGANISM: Felis catus
;   FEATURE:
;   NAME/KEY: CDS
```

;  EARLIER FILING DATE: 1996-11-13
;  NUMBER OF SEQ ID NOS: 13
;  SOFTWARE: PatentIn Ver. 2.1
; SEQ ID NO 4
;   LENGTH: 1870
;   TYPE: DNA
;   ORGANISM: Artificial Sequence
;   FEATURE:
;   NAME/KEY: gene
;   LOCATION: (1)..(1870)
;   OTHER INFORMATION: Interleukin-12 (IL-12, p40-subunit); Oligo DNA Dumbbell
;   FEATURE:
;   NAME/KEY: misc_binding
;   LOCATION: (1)..(2)
;   OTHER INFORMATION: intramolecular binding site; the T-nucleotides at position 1 to
;   OTHER INFORMATION: 2  can be modified with amino or caroxy features
;   FEATURE:
;   NAME/KEY: misc_binding
;   LOCATION: (1869)..(1870)
;   OTHER INFORMATION: intramolecular binding site; the T-nucleotides at position 1869
;   OTHER INFORMATION: to 1870  can be modified with amino or caroxy features
;   FEATURE:
;   OTHER INFORMATION: Description of Artificial Sequence:  Strandness: both;  nucleic
;   OTHER INFORMATION: acid (linear),  hypothetical: No. 6451593 anti-sense: No

RESULT 1
US-09-917-265-29
; Sequence 29, Application US/09917265
; Patent No. US20020052030A1
; GENERAL INFORMATION:
; APPLICANT: Wonderling, Ramani S.
; APPLICANT: Boroughs, Karen L.
; TITLE OF INVENTION: CANINE AND FELINE PROTEINS, NUCLEIC ACID MOLECULES AND USES THERE
; FILE REFERENCE: IM-5
; CURRENT APPLICATION NUMBER: US/09/917,265
; CURRENT FILING DATE: 2001-07-27
